THRUST AREA

The broad field of my research is Phyto-therapeutics and our group has been in practice for several years. In this particular field, we are focusing on the use of medicinal plants and their clinical importance through biochemistry approaches. In which, the beneficiary aspects of clinical biochemistry have paved the ways in the development of Pharmacognosy. Further, we have put efforts to combine the examination of biochemical compounds, isolated from Phytotherapeutic plants, towards the genetic aspects with the help of in vivo approaches. Herein, it can elucidate the impact of the isolated biochemical compounds on the subjects at a molecular genetics level in terms of epigenetic studies and also perceive new insights over the analytical studies.
